Fixeon's 450mm Hawk™ Horizontal Wafer Shipper

AUSTIN, TX March 31st, 2009: Fixeon is proud to announce the addition of the 450mm Hawk™ to its successful line of horizontal wafer shippers (HWS). The 450mm Hawk will be available in February of 2009 to the global semiconductor industry.

The Hawk™, is a blow molded HWS which incorporates many high performance features which provide the best protection solution in the industry for shipping 1 to 25 wafers. Fixeon uses the cleanest and most resilient polypropylene co-polymer in its shipper. In addition, the design lends itself to absorbing shock better than injection molded or thermoformed wafer shippers due to the dual wall, air filled shell.

The Hawk has a low nest-able profile, which provides secure stacking with less storage space. Wafers are equally suspended by the use of die-cut wafer separator rings and foam cushioning consumables. Other features include 7 removable nylon fasteners, a replaceable environmental seal, K-pin interface and ergonomic handles in the base for secure manual handling. Optional features include a stationary injection molded cassette with wafer edge grippers to hold 4 wafers similar to a Front Opening Shipping Box (FOSB).

"With our introduction of 450mm wafers, Fixeon has recognized the challenge and assumes responsibility to provide alternative innovative solutions to our customers" says Brian Cox, CEO and Founder of Fixeon.

Fixeon's customer focused attitude is committed to exceeding expectations by providing a total solution for the global semiconductor industry to protect silicon wafers during processing, storage and transportation.
