Horizontal Wafer Shipper

Staff – Semiconductor International, 11/1/2006

The Hawk is a blow-molded, 300 mm horizontal wafer shipper for shipping 2-25 wafers. It has a dual wall for improved shock absorption, as well as an air-filled lid and base. The Hawk has a low nestable profile to provide secure stacking with less storage space. Wafers are equally suspended by the use of die cut wafer separators and foam-cushioning consumables. **Infixeon**, Austin, Texas, www.infixeon.com
