Fixeon's 450mm Hawk™ Horizontal Wafer Shipper

AUSTIN, TX December 31, 2008: Fixeon is proud to announce the addition of the 450mm Hawk™ to its successful line of horizontal wafer shippers (HWS). The 450mm Hawk will be available in February of 2009 to the global semiconductor industry.

The Hawk™, is a blow-molded HWS which incorporates many high performance features, providing the best protection solution in the industry for shipping 1 to 25 wafers. Fixeon uses the cleanest and most resilient polypropylene co-polymer in its shipper. In addition, the design lends itself to absorbing shock better than injection-molded or thermoformed wafer shippers due to the dual-wall, air-filled shell.

The Hawk™, has a low nest-able profile, which provides secure stacking with less storage space. Wafers are equally suspended by the use of die-cut wafer separator rings and foam cushioning consumables. Other features include 7 removable, dual locking nylon fasteners, a replaceable environmental seal, K-pin interface and ergonomic handles in the base for secure manual handling. Optional features include a stationary injection molded cassette with wafer edge grippers to hold 4 wafers similar to a Front Opening Shipping Box (FOSB).

“Fixeon recognizes the new challenges faced with the introduction of 450mm wafers, and assumes responsibility to provide alternative, innovative wafer handling solutions to our customers” says Brian Cox, CEO and Founder of Fixeon.

Fixeon is committed to exceeding expectations through their customer-focused attitude and by Providing total solutions for the global semiconductor industry to protect silicon wafers during processing, storage and transportation.
