

Fixeon Quarterly News Bulletin

August 15, 2008: Due to the growth in Fixeon's wafer shipper business, our team has added three new managers to provide and maintain quick response to our customer's needs.

Jeff Graham joins us as our new Business Development Manager. Jeff has been involved in the semiconductor industry in various roles for the past 24 years. His sales and industry experience include wafer level R&D, process and facilities engineering operations, and supply-chain management at Texas Instruments, Air Products, ATMI and other companies. His primary focus has been sales and project management for the past 10 years. Jeff holds a Bachelors of Science in Chemical Engineering from the University of Oklahoma.

Shana Beck, our new Sales and Marketing Coordinator has over seven years of combined sales and marketing Experience. Her role will include customer service, marketing and public relations, as well as coordinating new

business sales and managing the Recycle, Cleaning and Reuse businesses.

Mike Hernandez has been hired as the Cleanroom Logistics Supervisor. Mike has over fifteen years experience in cleanroom semiconductor wafer logistics and processing. He has worked for Spansion, Freescale Semiconductor,

Texas Instruments, Sematech, and Samsung.

Fixeon is growing! With the expansion of our team and the increase in business came the need for a larger facility. Our new location will still be at 2120 W. Braker Lane, but Suite J. Our new location will provide us 120% more space, which is needed to take on the bigger opportunities coming our way. In addition to more offices, the new space will double our cleanroom capacity, and allow us to warehouse our inventory onsite.

Growth: We would like to announce that Fixeon has been awarded a global sales contract for the 300mm Hawk™ Horizontal Wafer Shippers for a large semiconductor manufacturer worth \$1.2 million.

We have also formed an exclusive US distribution and development alliance with Dynamic Micro Systems (DMS) in Germany. DMS currently manufactures wafer process and reticle cassettes.

Although our cleaning services were intended for our proprietary and reuse products, we have seen stellar growth from our customers seeking fast, affordable, high quality cleaning services in the US. For more information visit us at www.semi-clean.com.

New Products: Fixeon is a market driven, innovative product development company which has continued to engage customers that are looking for alternative wafer handling solutions.

- Film Frames, Wafer Dicing Tape, and Film Frame Wafer Shippers
- 450mm Single Wafer Shipper, Horizontal Wafer Shipper and Top Opening Shipping Boxes
- 200mm Horizontal Wafer Shippers
- 150mm Single Wafer Shippers

Upcoming Trade Shows: October 7-9, 2008 Fixeon will be at the Euris Semiconductor booth at Semicon Europa in Stuttgart, Germany. You can also visit us at the Hakuto booth at Semicon Japan in Chiba, Japan December 3-5, 2008.
